

Warragamba Dam Visitor Centre Forecourt

Location

Warragamba Dam, Sydney

Client

LNSM Joint for Sydney Catchment Authority

Project period

2006-2009

This project originates from a master planning process commencing in 2000, prompted by the construction of a spillway adjacent to the dam. At that time, Mark Harper was the Project Landscape Architect at Spackman & Mossop (now Spackman Mossop Michaels) responsible for the day-to-day management of the project in association with joint venture partners Lahz Nimmo Architects.

The master plan was partially constructed by 2001, when the events of September 11 delayed final implementation. Subsequent to this, the design for the Visitor Information Centre and Forecourt was reconsidered and in 2004, LNSM Joint (Spackman & Mossop with Lahz Nimmo Architects) were recommissioned to complete this ambitious undertaking.

Having since established his own practice, Atlantis Design was subsequently engaged by Spackman & Mossop to provide continuity for the project by retaining Mark Harper on the project team.

Services included concept design development and documentation in close collaboration with the consultant team and design support during construction including responding to RFI's, attending site inspections, consultant co-ordination and client liaison.
